

## STATIONARY

For those areas where it is desirable to keep motorists advised to their current speed, a fixed location version of the speed sign is available. The direction sensing doppler radar unit will “see” only those vehicles approaching the sign - the problem of false speed readings by vehicles traveling the other direction is eliminated. Power is supplied by a 12 VDC battery or a 110 VAC power inverter. The same weather resistant / impact resistant fiberglass housing is used in this sign.

*Both stationary and international signs are available as basic speed display or with computer control module for added features - alert, alarm, blanking*

*International option is also available in the stationary model*

## INTERNATIONAL VERSION

3 digit version is available with radar set to read KPH. Choice of (4) speed limit signs included with all units.  
(multiple languages available for sign caption)
